

For many an amateur photographer this new lens with continuously variable focal length from wide-angle through to medium telephoto range represents a dream come true. If a lens is to be of any value to the amateur, it must be compact and lightweight and, at the same time, assure good image quality.

The new Vario-Sonnar does not claim to be the smallest zoom lens of its focal length range, but it does combine highly satisfactory performance with appealing lightweight, handy design.

Number of lens elements: 13
