Thank you for purchasing this Samyang Optics product.

The Samyang AF 35mm F1.4 FE lens is a high performance AF single vision lens designed exclusively for the E-mount of SONY α interchangeable-lens cameras. (This lens cannot be used with an A-mount camera.)

Before using

- Please read this instruction manual and familiarize yourself with the functions of the lens, the operating method and cautions for handling the product correctly prior to use.
- Also refer to the instruction manual of the camera you are using with the lens.
- The supported functions of this product may vary according to the camera model.
- For detailed information regarding compatibility, visit the certified service center or refer to our homepage. (https://www.samyangoptics.com)

Cautions for using the lens

In order to maintain user safety and prevent damage to the product, fully familiarize yourself with the following items in order to use the product correctly.

- It is dangerous to look at the sun through the lens directly. Doing so may seriously impair your vision.
- Be careful not to apply an impact when attaching the lens. The lens is a precision optical product, so dropping or applying excessive impact to the lens may cause product failure.
- In order to use the lens safely, attach or detach the lens while the camera is turned off.
- Be careful not to touch or contaminate the contact point on the mount. If an electric signal is not transmitted between the camera and the lens smoothly, a malfunction may occur.
- Do not wet the lens or touch the lens with a wet hand when using the lens near water. Doing so may result in fire or electric shock.
- It is recommended to use a strong tripod. If a weak tripod is used, the tripod may fall, damaging the camera and the lens.

The following precautions are divided into two types according to the level of danger:

**WARNING**
- Do not use the lens cap and lens hood on the lens simultaneously. Doing so may cause the lens cap to become damaged.
- Do not use the lens cap and lens hood on the lens simultaneously. Doing so may cause the lens cap to become damaged.
- Do not use the lens cap and lens hood on the lens simultaneously. Doing so may cause the lens cap to become damaged.

**CAUTION**
- Do not use the lens cap and lens hood on the lens simultaneously. Doing so may cause the lens cap to become damaged.
- Do not use the lens cap and lens hood on the lens simultaneously. Doing so may cause the lens cap to become damaged.
- Do not use the lens cap and lens hood on the lens simultaneously. Doing so may cause the lens cap to become damaged.

Storing the lens

- Do not store the lens without a lens cap in a location with direct sunlight, such as inside a vehicle. Direct sunlight passing through the lens may be concentrated, causing a fire.
- If the lens is placed in a hot location, damage or distortion may occur and problems in the performance may occur.
- Store the lens in a dry and well-ventilated location. Avoid direct sunlight and do not store the lens with naphthalene or moth balls.
- Avoid using the lens in a location with drastic temperature changes. In particular, if you move a lens that has been chilled in a cold location to a warm location, moisture in the air may be concentrated outside or inside the lens, causing product failure or the production of condensation. In such a case, keep the lens in a plastic bag or an exclusive camera bag and take it out when the temperature of the lens becomes similar to the peripheral temperature.
- Keep the lens out of the reach of children. Failure to do so may cause an accident or personal injury.

Cleaning the lens

- If the lens surface gets dirty, dust off using a lens blower or a brush and wipe it with a soft and clean cloth (cleaning tissue, cotton cloth, etc.).
- When dusting or cleaning the lens, do not use an organic solvent such as thinner, alcohol, or benzene.
- When cleaning the lenses, put a small amount of ethanol or lens cleaner on a soft and clean cloth or a cleaning paper and wipe the lenses by circling outwards from the center.

Components

- Lens
- Lens cap (front, rear)
- Instruction manual
- Hood
- Portable pouch
- Warranty
**Mounting a Hood**

Align the attachment reference point on the hood with the reference point for the hood on the lens, push the hood onto the lens, then turn the hood clockwise until it makes a clicking sound.

---

**Focus mode setting**

- There are five focus methods for SONY’s interchangeable-lens cameras. *(This may vary according to the camera model.)*
- **AF-S (Single shooting AF):** The focus is adjusted automatically in the camera.
- **AF-A (Automatic AF):** The camera switches to single shooting AF or continuous AF mode automatically according to the movement of a subject.
- **AF-C (Continuous AF):** The focus is adjusted continuously in the camera.
- **DMF (Direct manual focus):** Manual fine adjustment is available after automatic focusing.
- **MF (Manual focus):** The focus is adjusted manually.

- For detailed content regarding the focus mode setting, refer to the instruction manual of the camera.
